

## COMP4050 Week 5 Meeting

Sprint 3, Commencing 24/08/2021:

- Back-end:
  - Users can put in a mobile phone number for registration.
  - Rename 'mobilePhone' field to 'phone' in database.
  - Check that 2 passwords are the same
  -
- Front-end:
  - Make sure mobile phone field is recognised
  - Working on dashboard
    - Sub-pages that need to be completed as well
  - Changing the UI for the homepage

Agenda:

- Make sure mobile phone field is recognised on front end
- Make sure that this week's progress is merged into one branch
  - Merge front-end
- Organise team goals for sprint 3.

Meeting notes:

- Tony has merged branches, asks us to pull from main.
- 'Homepage' is the most likely place an issue may arise.
- Moderator in design
  - Someone is registering, who is going to check that this registration is authentic?
  - When you register a person, we don't provide enough information to prove whether that person exists
  - Transparent, everyone knows everyone else
- Something in the req body is throwing an error when registering a new user.
- Adding versionKey to the userSchema and jobSchema removed the '\_v' field (for versionKey) from our mongo database:  
Entry using mongo (top) vs entry using previous registration (bottom).

```
